

Best Nationwide Sustainable Parts Washing Equipment Provider 2021

Eco Parts Wash Ltd is a Midlands-based family-run business and supplier of eco-friendly, water-based industrial parts washers and degreasers. Its products are supplied to the automotive, industrial, marine, aerospace, bike, pharmaceutical, and aviation industries, with the Ministry of Defence among its clients.

Founded by Tony Roper who has extensive experience in the field of parts washing, Eco Parts Wash Ltd is the global leader in bioremediation and approved supplier of the CRC SmartWasher®, OzzyJuice®, OzzyMat® and the production of speciality chemicals for maintenance, repair and operational professionals.

Eco Parts Wash's unique use of microbes offers customers unrivalled cleaning through the process of bioremediation, which is the use of microbes to break down or neutralise "hazardous substances" or "contaminants" thereby removing dangerous chemicals from the environment. The science of bioremediation is innovative and one of the most proven technologies for safe cleaning.

OzzyJuice® contains a surfactant. This breaks the surface tension between the grease and the part instead of dissolving it, with the effect that the grease lifts right off the part to leave the surface perfectly clean.

The SmartWasher® Bioremediating Parts Washing System is self-cleaning as well as safe for the user – the bioremediation process keeps the OzzyJuice® cleaning/degreasing solution clean without the need for regular monthly servicing.

Even though it supplies the world famous SmartWasher®, Eco Parts Wash is a small firm that guarantees a genuine customer service. There are no extensive levels of management to deal with if a client has an issue – just a small team of friendly people. It is a customer-oriented company that puts the interests of its customers first. It's not focused on profit over service and it doesn't have hungry shareholders to feed! If its products are not the right fit for the customer, it always tells them so.

Supplying the world leading bioremediation eco-friendly parts washing machine makes Eco Parts Wash extremely proud that it is doing its bit to help with the environment. Its machines are not only green, but they don't need regular servicing unlike conventional parts cleaners. This not only saves customers considerable amounts of money, but it also reduces their carbon footprint. No visiting service engineers on a regular basis means less vehicles on the road.

More and more companies are seeing the benefits of moving away from dangerous cleaning chemicals such as solvents by using water-based cleaners. The workplace is becoming a much safer environment when using water-based SmartWashers, with the UK Ministry of Defence having been using Eco Parts Wash's SmartWashers for nearly 17 years, and its machines being found all around the world.

SmartWashers can be found in almost every Halfords store in the UK, Decathlon, Evans Cycles and Cycle Republic, to name a few.

Looking towards the future, Eco Parts Wash is feeling confident and looking forward to increasing its range of Hot Wash Automatic machines and continuing to save customers money compared to expensive rental contracts, as the out-right purchase of Eco Parts Wash's machines offers substantial savings in comparison. No lengthy contracts to sign, no ongoing expensive service options.
